

CARPE DATUM

Fed Data Prospector

VOLUME 1. ISSUE 35.

August 7, 2019

Welcome to Carpe Datum's **Federal Data Prospector** (Vol. 1, Issue #35). No doubt about it – the Fed Data Opportunity Market is heating up! We're seeing many new business deals that would make any federal BD Manager take notice. Below, we've highlighted a couple of them that caught our eye; however, don't forget to dive into all of the Opps and see what we else found.

- *Solicitation – Commercially Linked Open-Source Entity Reports from the NGA* - requesting Commercially Linked Open-Source Entity Reports (CLOSER) with inherent due diligence to enable the rapid screening and persistent monitoring of commercial entities and associated individuals.
- *Solicitation - International Trade Data Service from the USDA* – annual subscription service providing monthly official merchandise trade data by HS Code covering approximately 85 countries accessed through a vendor's web-based interface.

In data-related news, the New York Times reported about “London Stock Exchange to Buy Refinitiv, a Data Provider,” which is particularly interesting given the fact that Thomson Reuters sold their Eikon division to a Blackstone-led team less than a year ago. One could imagine that with such lucrative (and rapid) returns, deals like this one will only increase.

- “Market data, the lifeblood of the trading industry, has emerged as a big avenue for growth. The all-stock deal to acquire Refinitiv, a former arm of Thomson Reuters that is now controlled by the investment giant Blackstone and others, will put the London Stock Exchange Group in competition with giants like Bloomberg L.P. ”

Happy Fed Data Opportunity Hunting!

The Carpe Datum Team
